

# PräGnant

Blocking press Type 30

## Blocking press

The **PräGnant** machine is a foil blocking press specifically designed for the needs of craft bookbinders and library binders.

The typeholders are self-centering and, by means of a quick-acting clamp, they allow an extremely easy and quick change of single type or complete lines. This qualifies the **PräGnant** to be used wherever "one-off" titles are to be blocked.

The book case (or other product) is placed upright into the machine, so that the blocking process can be observed all the time and if necessary be repeated without touching the case or taking it out of the machine. Expensive faulty blockings are therefore eliminated.

The good view onto the case while blocking makes the machine also suitable for special gilding work such as blocking ornaments.

The **PräGnant** - a unique machine for a wide range of applications, including bookbinding, pattern-book manufacturing and gold-blocking departments. Moreover, the quick change of type as well as the easy handling of the machine help to reduce costs in the field of gold blocking.

### Technical data:

**Floor space:** 60 x 60 cm

**Weight:** approx. 60 kgs

**Power supply:** 230 Volt (A.C.)

**Foil feed:** manual

**Stamping table:** 430 x 500 mm with metal bar to be adjusted in parallel, inclination of table adjustable

**Pressure:** approx. 400 kp by means of a knee lever

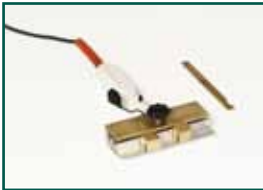

Subject to technical alteration

## Accessories:

Typeholder of 90 mm width with quick-acting clamping device.  
Power supply:  
230 volts - 100 watts

Extension arms (3 parts) – extend the blocking line and the bottom stop and hold the sample card for blocking large cases

Typeholder of 200 mm width with quick-acting clamping device. Power supply:  
230 volts - 150 watts

Sign mark attachment for blocking sign marks onto the spine of ready books up to 50 mm from the edge

Blockholder for blocking several lines and small blocks up to 60 x 60 mm.  
Power supply:  
230 volts - 80 watts

Round-blocking plate to block shapes and elements on to book covers and box lids.

Thermostat with two separately adjustable and one non-adjustable socket for different accessories.  
Power supply: 230 volts A.C.

Grooving and buckle-folding tools to hang onto the top of the stamping table. Available in 2, 4, and 6 mm thickness

Centraliser to be fixed to the metal bar on the embossing table. Centralises the spine of a case to block the title

Strong magnets to fix the stamping product to the stamping table. Available in size I (20 x 30 mm) and size II (20 x 120 mm).
